Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of JP411006073A and in view of USPN 6,221,690 to Taniguchi et al and in view of USPN 5,635,671 to Freyman et al. AAPA describe well known resist removal and subsequent article encapsulation. JP411006073A describes well known laser beam irradiation which cuts and roughens a surface prior to coating. Taniguchi et al describe (column 6, lines 40-67) cleaning of resist from a surface using a CO2 laser and subsequently encapsulating the article in a mold. Freyman et al describe (column 11, lines 48-51) degating as part of an automated encapsulation process in an automold system. The instant claimed process would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because both the cleaning and roughening steps are known for improvement of adhesion and because the automated cleaning and molding is well known in an automold process.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kuge et al describe laser trimming prior to package molding. Motokui et al, Geisler et al, and JP10310859A describe laser treatment comprising roughening prior to coating. EP000472768A1 describes surface roughness improves adhesion.
